

# COVID-19

## I GOT A VACCINE. NOW WHAT?

### HOW LONG DOES THE VACCINE TAKE TO WORK?

	Pfizer-BioNTech	Moderna	Janssen
DATE FULLY VACCINATED*	2 weeks after the second dose	2 weeks after the second dose	2 weeks after the single dose

\* If it has been less than 2 weeks since your 1-dose shot, or if you still need to get your second dose of a 2-dose vaccine, you are NOT fully protected. Keep taking all prevention steps until you are fully vaccinated.

### WHY DO I NEED TO COME BACK FOR A SECOND DOSE?

The FDA-authorized Pfizer-BioNTech and Moderna vaccines require a two-dose series to achieve the highest levels of immunity. Janssen only requires a single dose.

### WILL I GET PROOF OF VACCINATION?

Yes. After each of your shots, you'll be given a vaccination card that tells you exactly which COVID-19 vaccine you received and the date and location where you were vaccinated.

### DO I HAVE TO CONTINUE WITH PRECAUTIONS AFTER I'VE BEEN VACCINATED?

While vaccines must be highly effective to be approved for use, no vaccine provides 100% immunity. Public health officials estimate that 70-85% of the population needs to be vaccinated to stop the spread of the virus. In the meantime, it's important to continue to take precautions like wearing a mask, social distancing, and frequently washing your hands. This is especially important to protect your family and friends as they wait to get their vaccine.

### HOW LONG DOES THE VACCINE LAST?

The world's leading scientists are in the process of determining how long immunity from COVID-19 vaccines last and if people will need additional booster shots to extend immunity.
